

Speech Pathology for Children

What is Speech Pathology?

Speech pathologists help people of all ages to communicate. Speech pathologists also help people who have trouble swallowing, which can make eating and drinking difficult.

What Can We Help With?

- ✓ Language (difficulties understanding and using words and sentences)
- ✓ Speech sounds (difficulties saying sounds and words clearly)
- ✓ Social communication (e.g. conversational skills, sharing, facial expression)
- ✓ Play skills and attention (e.g. pretend play, turn-taking, waiting)
- ✓ Stuttering (e.g. repeats or prolongs sounds or words; may 'block' and find it hard to start speaking)
- ✓ Literacy difficulties (phonological awareness, spelling and reading)
- ✓ Feeding difficulties (e.g. chewing, swallowing, 'fussy eating')
- ✓ Multimodal communication (e.g. communication devices, key word sign, visual communication systems).

Ready to reach your goals?
